

ABSTRACT

A milk foam delivery pipe for an espresso coffee maker includes a steam delivery pipe, a milk delivery pipe, a mixing joint and a milk foam delivery pipe. Both the steam and the milk delivery pipes are connected to the mixing joint.

- 5 A mixture outlet is disposed in the mixing joint to connect through the milk foam delivery pipe. The milk foam delivery pipe is a continuous curving pipe including a first curving section and a second curving section. A milk foam outlet is provided to a free end of the second curving section to produce delicate and well-mixed milk foams.
